Art Unit: 3736

1/ 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-17 are rejected under 35 U.S.C. 101 because the disclosed invention is inoperative and therefore lacks utility. While the claims have been amended to remove language that the reflector is used to converge magnetic energy to the focal point, the specification still discloses the only use of the reflector as converging the magnetic energy to the focal point. As discussed in the previous office action it is unclear how the reflector would converge the magnetic energy since magnet posses no propagated waves, which would make the device inoperative as disclosed.

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-17 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. As discussed above and in the previous rejection the disclosure of applicant's device teaches using a magnetic apparatus to apply a magnetic energy to an acupressure point. The device uses a reflector to converge the magnetic energy to the focal point. However, as state previously, reflectors are used to focus propagated waves, while permanent magnets possess no propagated waves making the

specification incorrect and providing an inadequate written description of the device since it would be unclear how the reflector would in any way affect or focus the magnetic energy to the focal point. While applicant has taken such language out of the claim the only disclosed use of the reflector is to focus the magnetic energy which still makes the subject matter not being described in the specification in such a way as to enable one skilled in the art to make and/or use the invention.
